

# Remote Physiologic Monitoring Devices in Action Day | June 1, 2026

**Monday, June 1, 2026 from 9:00 a.m. - 5:00 p.m.**  
**Education Resource Center - Conference Room B**  
**No Registration Required**

Please visit the Remote Physiologic Monitoring (RPM) Devices in Action Demo Day for a hands-on look at how your department or clinic could be supported in developing an RPM program for your patients.

In partnership with Locus Health, the Population Health Department is hosting a drop-in event showcasing the Locus Health platform and supported monitoring equipment. The Locus Health platform is clinician-built and bundles Bluetooth measuring devices and a cellular hub for collecting patient-reported data that is uploaded to the electronic health record (EHR) in a single workflow.

The Remote Physiologic Monitoring Devices in Action Demo Day is open to all UVA Team Members and will provide:

- Technology demonstrations in pediatric care, adult care, and the mechanics of patient engagement
- Interactive demos using supported RPM devices and technology
- Q&A with Population Health and Locus Health team members
- Guidance for launching a clinical model of care with digital technology

For more information, please contact  
**Jennie Thomas, Population Health Specialist**
